

WIBIOCARD • YOU ARE THE KEY

Regional Distribution & Systems Integration Partner

BUSINESS PLAN & ROI ANALYSIS

Launching a Firm Built Around WiBioCard Biometric Smart Cards

Prepared: August 2026

All financial figures in Indian Rupees (INR), converted at ₹95.4 / US\$1

1. Assumptions Used in This Plan

WiBioCard itself designs, patents and manufactures the biometric smart card technology and is raising its own US\$10M production round; a new firm entering "using this product" therefore most naturally launches as a regional distributor and systems integrator, on the model of WiBioCard's existing partners (e.g. Betacom, NexID). This plan models that path for a single territory (e.g. one country or region), with an initial capital base of approximately ₹3.6 crore (~US\$377,000) — a funded small-firm scale. Card pricing is not disclosed in the source deck, so unit economics below are stated as explicit, clearly-labelled assumptions that should be replaced with WiBioCard's actual wholesale terms before this plan is used to raise money.

Currency note: converted at the mid-market rate of ₹95.4 = US\$1 (August 2026). Figures rounded to the nearest thousand.

2. Executive Summary

WiBioCard has built a patented (2 Italian, 1 international), ISO-compliant biometric smart card — fingerprint sensor, HSM-secured element (EAL6+), rechargeable battery and e-ink display — that lets the card itself verify its holder, closing the classic "is the cardholder the owner?" gap in payments, access control, government ID, online authentication and crypto custody.

This plan proposes a Territory Distribution & Integration firm that licenses distribution rights, carries card inventory, and delivers turnkey deployments (hardware + backend software + support) to enterprise, government and crypto-market customers. Because WiBioCard already owns the hardware IP and manufacturing relationships, the new firm's capital needs are concentrated in inventory, systems-integration talent, certification/compliance and go-to-market — not R&D. Modelled on ₹3.6 crore of initial capital, the business is projected to sell roughly 26,000 cumulative cards and reach ₹15.0 crore in annual revenue by Year 3, turning EBITDA-positive already in Year 2, with capital payback around mid-Year 3.

3. Market Opportunity

The problem WiBioCard addresses is a basic identity gap: a smartcard proves someone holds it, not that they own it — and that gap is being exploited at scale as identity theft, AI-driven attacks and data breaches increasingly target financial and government systems.

- SmartCard-related identity fraud was projected to exceed US\$400 billion by 2023
- The global Smart Card Market was valued at US\$15 billion in 2019 and is projected to reach US\$26 billion by 2027, a 7.6% CAGR (Market Insider Group)
- Regulatory and compliance pressure (KYC, e-voting integrity, crypto custody security) is pushing buyers toward hardware-rooted, offline-capable authentication

4. Product Line

The firm distributes WiBioCard's four-tier product family, each pairing a fingerprint sensor and secure element with different interfaces and use cases:

Product	Positioning	Key Use Cases
WibioCard Access Lite	Compact, physical access control	Doors, checkpoints, facility access

Product	Positioning	Key Use Cases
WibioCard Authentica	All-in-one government & web identity	Gov't documents, web access, iVoting, VPN
WibioCard Authentica Display	Offline biometric authentication with on-card display and camera	Secure transactions, OTP, sensitive data access without external devices
WibioCard Authentica Display USB-c	Same as above plus USB-C wired interface and on-card crypto wallet	Crypto custody / Crypto Box, secure transactions, government ID

Feature matrix per the WiBioCard deck: Access Lite covers physical access only; Authentica and above add GovID, Web, VPN, iVoting and DocuSign-style e-signature ("Docu") support; only the Authentica Display USB-c tier supports the Crypto Box wallet function.

5. Business Model

The firm operates as an authorized territory distributor and systems integrator: it purchases cards from WiBioCard at wholesale pricing, resells them (with margin) to enterprise, government and crypto-market end customers, and layers on a recurring backend software/support subscription per active card — mirroring how WiBioCard's own partner network (Betacom, NexID and others) is structured.

5.1 Illustrative Unit Economics (assumption — confirm with WiBioCard commercial terms)

Item	USD	INR
Blended wholesale cost / card (from WiBioCard)	\$45	₹4,293
Blended resale price / card (to end customer)	\$95	₹9,063
Gross margin / card	\$50 (~53%)	₹4,770
Backend software & support subscription / card / year	\$8	₹764

6. Go-to-Market Strategy

WiBioCard's own go-to-market is B2B, built on strategic partners per continent or country and four priority verticals — this plan adopts the same targeting for the territory firm:

- Crypto market — hardware-secured wallet custody (Crypto Box) for exchanges, funds and high-net-worth individuals
- Access control and identification — corporate campuses, critical infrastructure, secure facilities
- Security online authentication — enterprise VPN/SSO replacement for weak passwords and phishable OTPs
- Government and public administration — national ID, e-voting integrity, e-signature/Docu workflows
- Land through pilot deployments with one flagship logo per vertical, then expand via public-sector tenders and channel partners (systems integrators, IT resellers)

7. Competitive Landscape

WiBioCard positions itself not just as a card manufacturer but as a system integrator delivering a turnkey solution centered on biometrics — a distinction the territory firm should carry into its own positioning against larger, hardware-only competitors.

Competitor	Country	Positioning
Idemia	France	Global smart card leader; biometric sensor smaller than WiBioCard's; matching reportedly not performed inside the banking secure element
Zwipe	Norway	Biometric authentication specialist, mainly non-ISO form factor, focused on Payments and Access Control
Feitian	China	PKI/strong-authentication products (POS, OTP, readers); biometric card in development on a touch sensor
Linxens	France	Components supplier (connectors, antennas); developing a biometric inlay with FPC
Giesecke+Devrient	Germany	Card manufacturer for financial/banking; partners with IDEX for biometric cards in Eastern Europe
Sentry Enterprises	USA	User-controlled biometric access-control smartcards; strategic sensor agreement with IDEX

8. Organizational Plan

Role	Year 1	Year 2	Year 3
General Manager / Country Head	1	1	1
Enterprise & Government Sales	3	5	8
Systems Integration Engineers	2	3	5
Customer Support / Ops	1	3	4
Total Headcount	7	12	18

9. Financial Plan

9.1 Start-up Investment (₹3.6 crore)

Category	Amount (INR)	Amount (USD approx.)
Territory license / minimum purchase commitment	₹50,00,000	\$52,400
Initial card inventory (3,000 units @ ₹4,300)	₹1,29,00,000	\$135,200
Team hiring & Year-1 salary runway (loaded cost)	₹1,10,00,000	\$115,300
Marketing, trade shows & tender/compliance	₹40,00,000	\$41,900

Category	Amount (INR)	Amount (USD approx.)
certification		
Working capital buffer	₹35,00,000	\$36,700
Total	₹3,64,00,000	\$381,500

9.2 Three-Year Growth Projections

Metric	Year 1	Year 2	Year 3
Cards sold (in-year)	3,000	8,000	15,000
Installed base (year-end, cumulative)	3,000	11,000	26,000
Avg. active installed base (for subscription)	~1,500	~7,500	~18,500
Resale price / card	₹9,060	₹9,060	₹9,060
Subscription / active card / year	₹760	₹760	₹760

9.3 Profit & Loss Summary

Line Item (₹ Lakh)	Year 1	Year 2	Year 3
Card Sales Revenue	271.8	724.8	1,359.0
Subscription Revenue	11.4	57.0	140.6
Total Revenue	283.2	781.8	1,499.6
Cost of Goods (cards + hosting)	130.7	352.6	666.1
Gross Profit (~54–56% margin)	152.5	429.2	833.5
Operating Expenses (team, sales, G&A)	175.0	280.0	400.0
EBITDA	(22.5)	149.2	433.5
EBITDA Margin	neg.	19.1%	28.9%

Figures in ₹ Lakh (1 Lakh = ₹100,000). Parentheses denote a loss. Card-hardware margin makes this model profitable earlier than a pure-services MSSP, but it also carries inventory and working-capital risk that a services-only business does not.

10. ROI Analysis

10.1 Operating Payback

- Initial investment: ₹3.64 crore
- Cumulative EBITDA after Year 2: ₹1.267 crore (still short of investment by ₹2.33 crore)
- Year 3 EBITDA of ₹4.335 crore closes that gap roughly halfway through the year
- Payback period: ≈ 2.5–3 years from launch

10.2 Investor / Exit-Value ROI (illustrative)

Distribution/integration businesses with a recurring software attach are typically valued on a blended hardware + recurring-revenue basis. Applying conservative multiples to Year-3 performance:

Valuation Basis	Year 3 Value	Multiple on ₹3.64 Cr Invested
1.0x trailing revenue	₹15.00 Cr	4.1x
2.0x trailing revenue	₹30.00 Cr	8.2x
8x trailing EBITDA	₹34.68 Cr	9.5x

Illustrative only. Actual achievable multiples depend on territory exclusivity, recurring-revenue share, government-contract durability and WiBioCard's own trajectory (it is itself raising US\$10M to fund production for 2024 orders, per the source deck).

11. Key Risks & Mitigations

Risk	Mitigation
WiBioCard is pre-production scale (raising its own US\$10M round) — supply risk	Secure firm supply/allocation commitments and lead-time guarantees in the distribution agreement before scaling sales commitments
Inventory / working-capital exposure on hardware	Stage inventory purchases against signed pipeline; negotiate consignment or milestone-based purchasing where possible
Long government/enterprise procurement cycles	Prioritize crypto-market and enterprise access-control verticals for faster early revenue while government pipeline matures
Competitive entry from larger players (Idemia, G+D) with more capital	Lead with WiBioCard's patented, in-card (not cloud) biometric matching and turnkey integration as differentiation
Single-supplier concentration	Negotiate multi-year territory exclusivity in exchange for volume commitments to reduce switching risk

12. Next Steps

- Confirm actual wholesale pricing, minimum order quantities and territory exclusivity terms directly with WiBioCard (contact: Imad El Kurdi, i.elkurdi@wibiocard.com)
- Select target territory and lead vertical (crypto custody vs. government ID typically have the fastest early sales cycles)
- Build a detailed 12-month hiring, inventory and cash-flow plan from the assumptions above
- Line up 1–2 flagship pilot customers per priority vertical to anchor the go-to-market

This plan uses illustrative assumptions (unit pricing, sell-through, margins) built from the public WiBioCard deck; all figures should be validated against actual commercial terms before being used to raise capital.
